CYBERSECURITY RISK ASSESSMENT GAP ANALYSIS

Client: EcoMada (E-commerce & Agritech)

Framework:	NIST Cybersecurity Framework (CSF) 2.0
Date:	November 2026
Analyst:	Nantenaina Mickaël Rakotondramanana
Scope:	AWS, Shopify, Company Laptops & Field Tablets

CLASSIFICATION: CONFIDENTIAL

1 Executive Summary

EcoMada has experienced rapid growth this year, but this expansion has left critical security gaps. The overall security posture is concerning: the company currently faces three major "High" exposure risks that could lead to customer data breaches or severe operational disruptions.

The most urgent vulnerabilities are the reliance on password-only authentication (shared among employees), the absence of a centralized device inventory for field tablets, and untested backups.

Top 3 Risks

1. **R-003 (Exposure 25, High):** Password-only cloud accounts (AWS, Shopify).
   Immediate Action: Enable Multi-Factor Authentication (MFA) for all administrative accounts.
2. **R-002 (Exposure 16, High):** Unmanaged field tablets and laptops.
   Immediate Action: Build a centralized device inventory and enable remote wipe capabilities.
3. **R-004 (Exposure 15, High):** Untested backups.
   Immediate Action: Coordinate a documented restore test for critical customer data.

30-Day Recommendations

Within the next 30 days, EcoMada must:

- Enforce MFA on all cloud and Shopify accounts.
- Implement a centralized asset inventory for all physical devices.
- Execute and document one critical data backup restore test.
- Draft and communicate a basic Incident Response Plan.

2 Scope & Methodology

Scope

The assessment covered EcoMada's technical environment, including:

- The e-commerce platform (Shopify).
- The customer database (AWS).
- 15 office laptops and 10 field sales tablets.

Methodology

The assessment was conducted using the **NIST Cybersecurity Framework (CSF) 2.0**. Five specific controls were evaluated by comparing EcoMada's *Current Practices* against the NIST *Target Practices*.

Risks were assessed using a 5x5 matrix:

- **Likelihood (1-5):** Probability of the risk occurring.
- **Impact (1-5):** Severity of the consequences.
- **Exposure Score:** Likelihood × Impact (Maximum 25).

3 Risk Register

ID	Score	Risk Description	Priority	Owner
R-003	25	Shared passwords and lack of MFA expose customer data to unauthorized access.	High	IT Specialist
R-002	16	Lost or stolen tablets/laptops could lead to data breaches without an asset inventory and remote wipe.	High	Operations Mgr
R-004	15	Untested backups could fail during a ransomware attack or outage.	High	IT Specialist
R-001	12	Undocumented cybersecurity roles cause critical tasks to fall through the cracks.	Medium	CEO
R-005	9	No incident response plan leads to chaotic reactions and extended downtime.	Medium	Operations Mgr

Note: The complete NIST CSF Gap Analysis and detailed remediation steps are available in the attached Excel file.

4 Conclusion

EcoMada has significant opportunities to improve its security posture. By addressing the top three high-exposure risks within 30 days, the company can drastically reduce the likelihood of a data breach and protect its growing customer base.

Disclaimer

This assessment was conducted in a controlled educational environment for portfolio purposes. No unauthorized testing was performed on live systems. This report demonstrates alignment with NIST CSF 2.0 principles but does not establish formal legal compliance or certification.
